New design options for your bathroom

Front and top actuation with Geberit UP200

Geberit UP200

Whenever you wish to install the WC under a pitched roof or under a window, Geberit offers you a space-saving solution, especially designed for such installation requirements.

The installation elements for the UP200 are made for shelf heights of 85 cm or 100 cm, the lowest in our range. The two variants to position the actuator plate allow actuation from the top or from the front.

So you have the possibility to place the WC in the window parapet and integrate the actuator plate in a window sill. Find out what is the best solution for your bathroom. Each UP200 can easily be converted into a top or a front operated unit by changing the position of the protection cover before installation.

Contemporary design and technology

Marvellously natural designs, combining harmony and quietness with clear and plain shapes and materials: This is contemporary bathroom design. The exclusive actuator plates of the Kappa series reflect these ideas and style. The upper picture shows Kappa20 (115.228.xx.1), material: plastic. Kappa50 (115.258.00.1) on the picture below is made of stainless steel.
